Use the diagram below to answer \#1-8.

1) $\angle A$ and $\angle E$ are $\qquad$ angles.
2) If $\angle A=13 y^{\circ}$ and $\angle E=(100+3 y)^{\circ}$, find the value of y .
3) Using your value from $\# 2$, what are the angle measures of $\angle A$ and $\angle E$ ?
4) $\angle B$ and $\angle H$ are $\qquad$ angles.
5) If $\angle B=(2 x+12)^{\circ}$ and $\angle H=(5 x-15)^{\circ}$, find the measure of $\angle H$.
6) Using your value from $\# 5$, what are the angle measures of $\angle B$ and $\angle H$ ?
7) $\angle D$ and $\angle F$ are $\qquad$ angles.
8) If $\angle D=(25 x-20)^{\circ}$ and $\angle F=(13 x+4)^{\circ}$, find the value of x .
9) Using your value from \#8, what are the angle measures of $\angle D$ and $\angle F$ ?
10) $\angle C$ and $\angle H$ are $\qquad$ angles.
11) If $\angle C=(6 x)^{\circ}$ and $\angle H=(3 x)^{\circ}$, find the measure of $\angle H$.
12) Using your value from \#11, what are the angle measures of $\angle C$ and $\angle H$ ?
13) In the diagram below, lines $n$ and $m$ are cut by transversals $p$ and $q$. What is the value of $x$ that would show lines $n$ and $m$ are parallel?

14) Show all work or explain how you got your answer to \#13.
